 Pollet Pool Group

# New in 2024

Aquadeck® is passionate about pools and covers. We see the cover as the most defining component of any pool. We produce top-quality slatted pool covers with care and craftsmanship. Thanks to this passion and expertise, Aquadeck has been a leading manufacturer of automatic cover systems for over 25 years.

Our most important partner? That is you, the pool builder. Every day brings a new opportunity to work with our products. Together, we follow trends and look for innovations, because innovation is an endless pursuit. It can always be better, smarter or more beautiful. That is why Aquadeck is also unveiling a variety of novelties this year. It is our pleasure to outline them for you here.

## New slat colour **PC Cobalt Solar**

Aquadeck is proud to present the new PC Cobalt Solar slat. A beautiful polycarbonate slat with solar effect. PC Cobalt Solar has a deep blue chic glow and presents a very natural look.

## Slat **Changed cap colour**

PC Graphite Solar will henceforth be fitted with a 'smoke cap' and transparent sealant. This cap complements the slat beautifully, enhancing the overall style significantly.

PC Solar will now be fitted with a 'black cap' and black sealant. The black caps and sealant lend the slat a much more serene and stylish appearance.

## Shark fin adaptation in colour and design

To better steer the first slat along skimmer flanges, for example, many customers use our specially designed 'shark fins'.

The shark fins were made more robust and attractive, while of course matching the new cap colours.

## Aqua DCB Digital Control Box March 2024

The Aqua DCB Digital Control Box makes installation and programming easier for the pool builder. Thanks to the DCB's Bluetooth module, you can use a smartphone to add the box in the Aquadeck PoolCover app and set up the cover. The direction of rotation of the motor can also be changed, speeds can be adjusted and the box can be used with all other brands of tubular motors.

## Surface-mounted LED control panel mid-2024

As an addition to the new DCB control box, we are also launching an LED control panel. This is a touchscreen that allows the cover to be opened and closed.

To operate the cover, a code must first be entered so that the consumer can prevent the cover from being operated unintentionally (by children, for example). All this in the context of safety. Any DCB error codes can be easily read out via the control panel.

**Tip:** Choose the DCB control box if you know that your customer wishes to operate the cover using a touchscreen. The touchscreen can be added later and connected by wire to the DCB control box.
